

COVID-19

INFO FOR YOU, KIDS!

WHAT is a virus?!

A virus is a type of GERM that can make you sick if you have contact with it, yuck!

So, Why is COVID-19 special?

COVID-19 is EXTRA germy, so it can spread super fast and make some people very very sick!

Why do we have to wear masks and stay far apart?

These itty bitty germs can travel a long way without us even seeing! So we wear masks and stay distanced to make sure that we don't catch the virus AND we don't give it to others!

How can you protect yourself and your family?

For now, it's best to stick to these **3 KEY things**:

- 1) Wear your mask!
- 2) Wash your hands (a lot!)
- 3) Keep a safe distance from others

Why are some people getting a needle?

These needles are called **VACCINES**. They will help to protect us from getting sick AND help to stop spreading the virus!

Why can't I get the vaccine?

Your growing bodies are a little bit different than grown ups! So scientists are working hard to make sure you can get a very special (and safe) type of vaccine soon!
